# Introduction

## Overview

A website is a group of web pages and connected content that is recognized by a common domain name and published on server. E.g. wikipedia.org, amazon.in . All publicly accessible websites consist the world wide web. WordPress is a great platform which has open source code and helps to develop websites easily with coding knowledge.

## Purpose

Websites now a days are boon with which people can grow their business and identity without much effort. In this project I got to learn the building of websites with WordPress .

# Literature Survey

## **Existing Problem**

Without having any knowledge of coding, is it possible to develop Websites that can serve business, portfolio and blogs?

## **Proposed**

Learning the development of sites is necessary so that we can help both ourselves and others with digital marketing and promotions and help grow.

# **Theoretical Analysis**

## **Block Diagram**

Domain -> WordPress site database-> Output as visual Website

The site works on servers and can be accessed as the domain and the codes work simultaneously for the visual display of the pages.

## **Software Design**

Wordpress is a open source software which helps in publishing and designing websites easily and effortlessly.

## **Experimental Investigation**

In the past it was served that we need learn coding for a website development but now days we can do that seamlessly with the help of WordPress and make them visibly user friendly by any individual.

The site developed by me helps in studies to gain free knowledge for their better future.

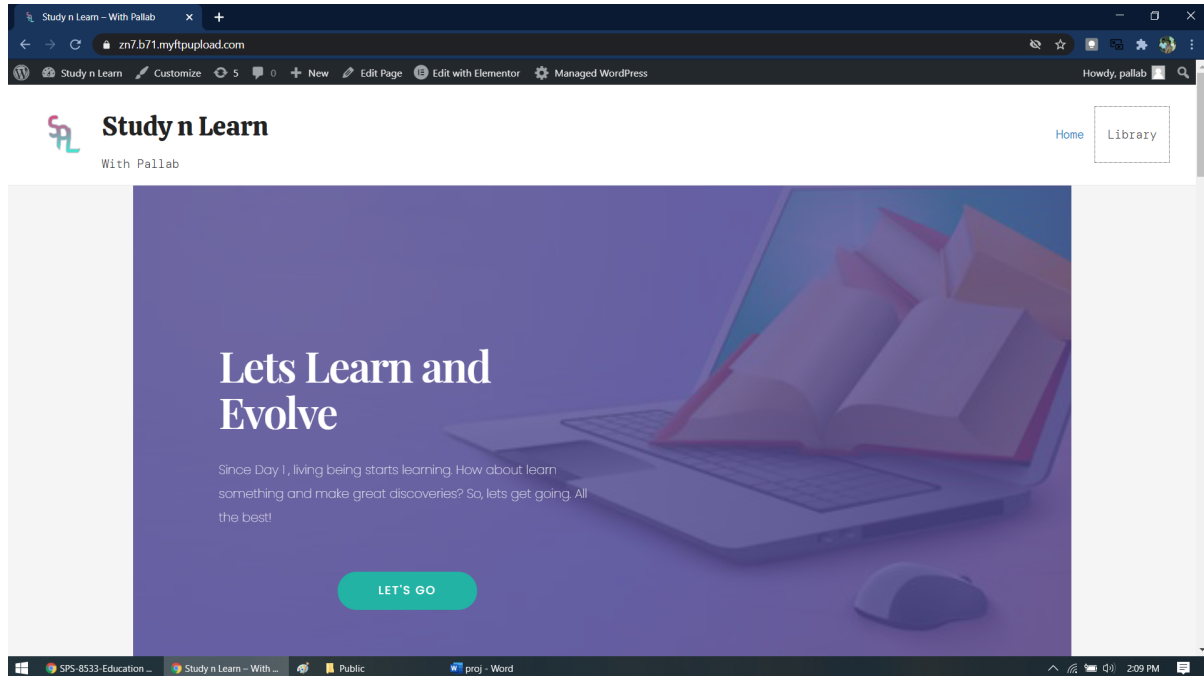

## **Flowchart**

Domain-> wordpress codes -> processed codes-> defined view as output

Here the site can work for owner to provide their desired content to their audience.

## Result

A website on WordPress is Built as the following pic.

Here the link of the site is also visible on the address bar.

## **Advantages / Disadvantages**

### **Advantage**

With the help of wordpress we can build our own website without any help of others or any knowledge of coding and learn to improvise seamlessly.

### **Disadvantage**

Without coding we cannot add crucial self plimented changes at different positions.

## **Applications**

We can grow out digital marketing range endlessly and let others visit our websites to know more about us easily without much need of interactions and thus, saving time and energy with gain in audience and customers.

## **Conclusion**

With the help of wordpress we can easily host well managed websites in colaboration with server providers like Godaddy. This is what makes the biggest change in the fasting moving era of learning and getting advanced.

## **Future Scope**

By the help of WordPress newer career options can come up in association to website building where due to increase in population and ideas more website developers will be needed in future.

## **Bibliography**

My project was possible to complete by the combined effort of various sources, few of them being:

WordPress.org

Godaddyacademy.com

Godaddy.com

Youtube.com-> RC Sir Channel

Appendix.

Video Recodings in the library taken from Rc Sir YouTube channel.
